# Vendor declarations

## Animal Feeds

Vendor declarations about the background and quality of the feed are supplied with consignments of feed to dairy farmers. The declaration includes information on the source of the feed, nutritional quality, chemicals used during growth and processing or potential for contamination through spray drift etc, testing status, and type of QA program used.

## Animals

Vendor declarations are legally required before animals move off farm or move onto the farm from other properties. The declaration provides information about the specific animal identification, health status, access to treated feedstuffs and veterinary treatment.
