Author: Leah Davies & Lesley Irvine

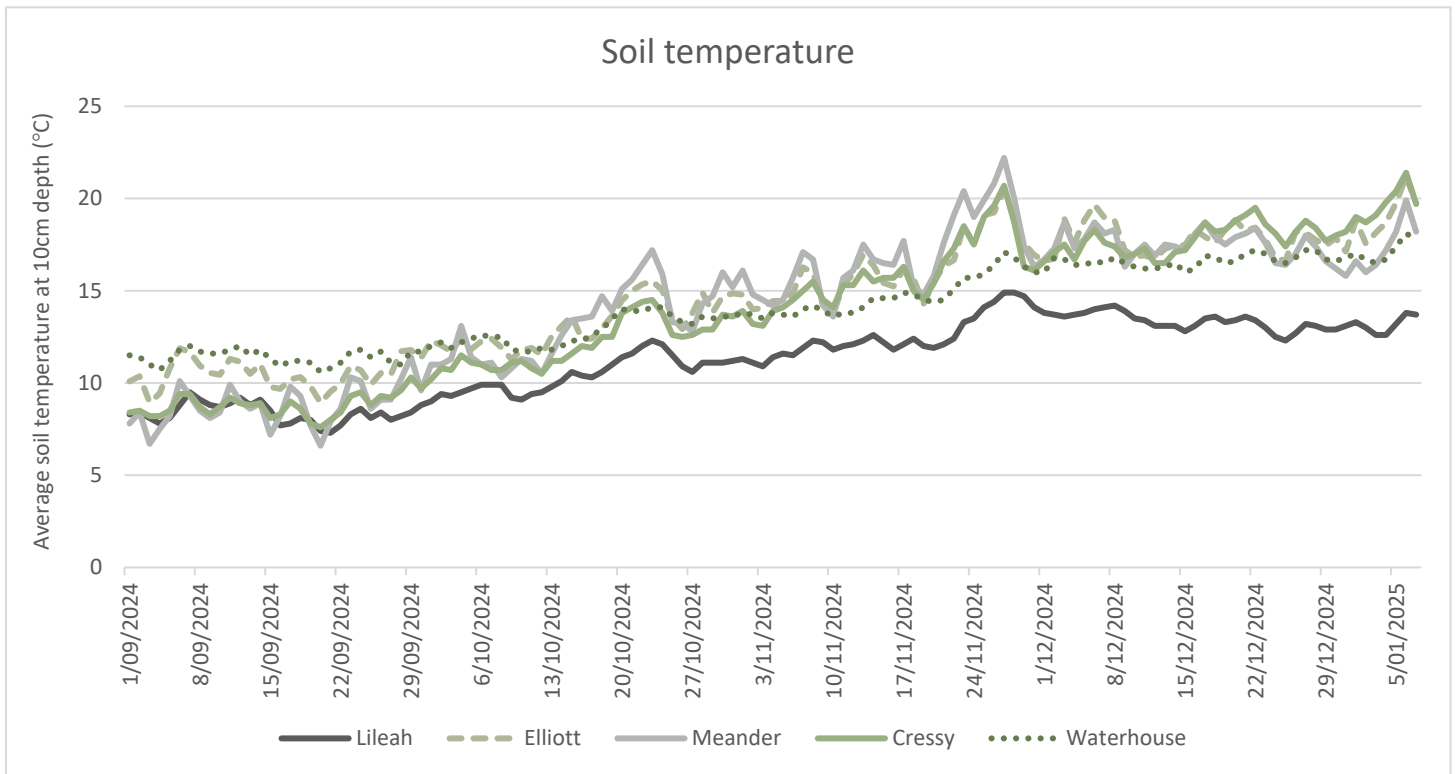

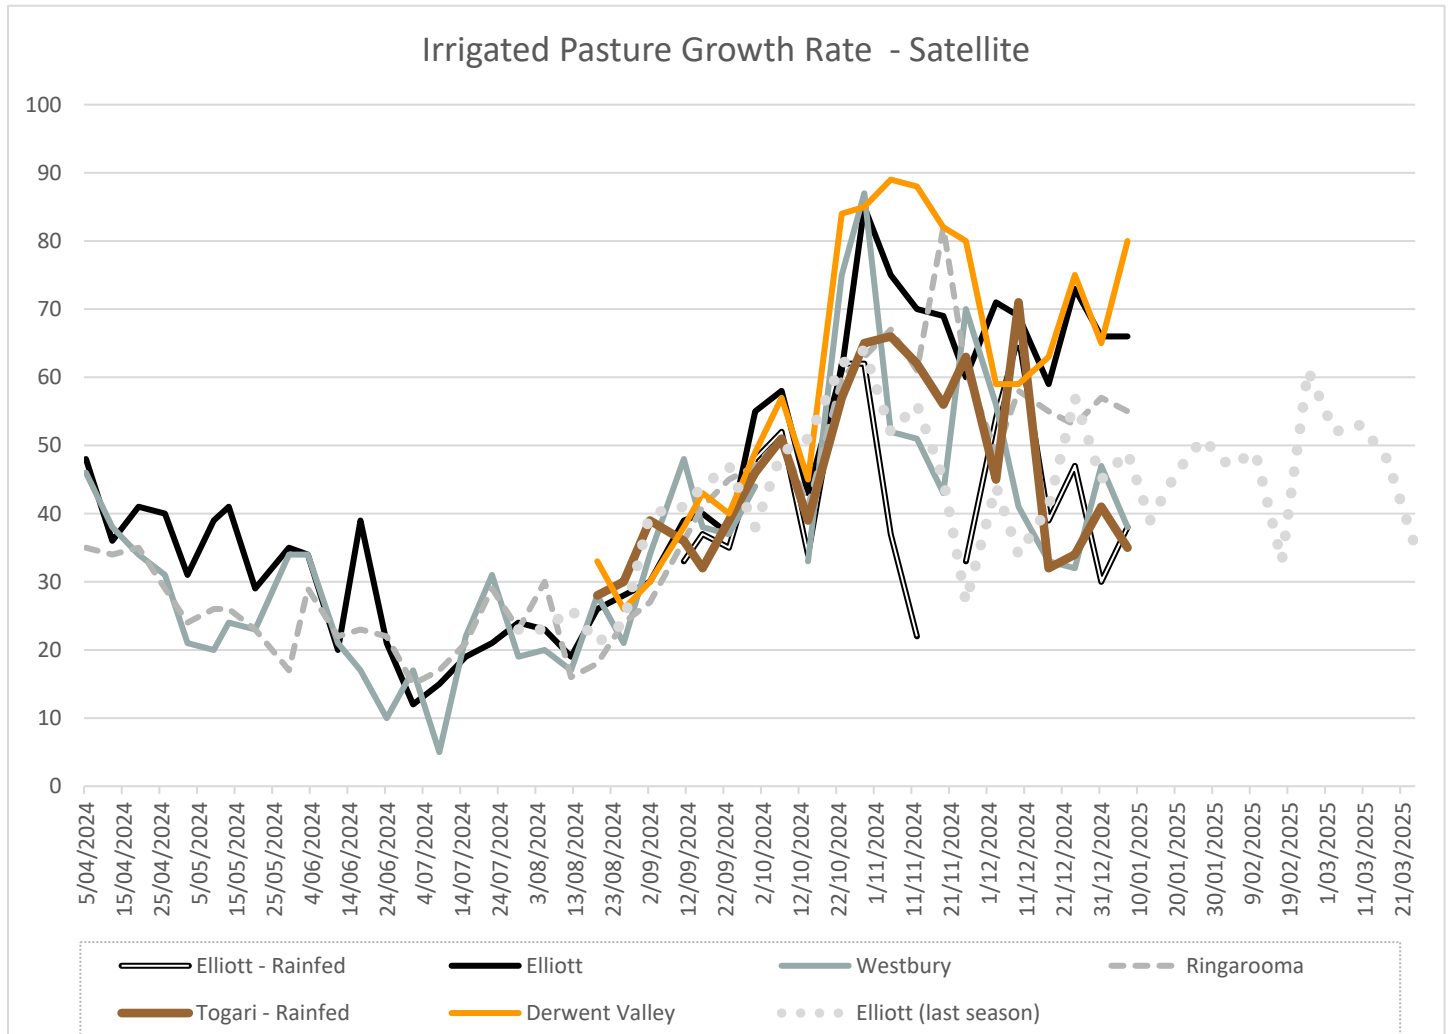

### Regional Pasture Growth Rates

Region	Pasture growth rate (kg DM/ha/day) - Satellite	
	Irrigated	Rainfed
Togari	-	35
Elliott	66	38
Westbury	38	-
Ringarooma	55	-
Derwent Valley	80	-

Pasture growth rates will vary between farms for many reasons including: climate, soil type, nutrient availability and management. Satellite pasture growth rates are sourced from Pasture.io (<https://pasture.io/>).

Leaf emergence rate at Elliott			
Leaf emergence rate (days per leaf)	Days to 2 leaf stage	Days to 2.5 leaf stage	Days to 3 leaf stage
Irrigated	8	16	24

# WHAT HAS HAPPENED OVER THE PAST WEEK

# Weekly Evapotranspiration & Rainfall

Wednesday, 1 January to Tuesday, 7 January 2025

Location	ET <sub>0</sub> <sup>1</sup> (mm)	Rainfall (mm)	Rainfall (month-to-date; mm)	Soil temp (°C) 9:00 a.m. @ 10 cm
Pegarah (KI)	-	-	-	-
Lileah	13.3	1.2	1.2	13.7
Elliott	26.4	0.2	0.2	19.7
Meander	33.6	0.6	0.6	18.2
Cressy	34.3	1.0	1.0	19.7
Ringarooma	-	-	-	-
Waterhouse	17.8	4.0	4.0	17.8

Data for this table is collected from the [UNITAS Weathermation weather stations](#) at Lileah, Elliott (Elliott Research), Meander (Clear Springs) and Waterhouse (Forester Lodge). These weather stations have been installed on [Smarter Irrigation for Profit II](#) optimised irrigation farms. Data for Pegarah (King Island) and Ringarooma is sourced from the Ag Logic Weather Station and Probe Network (<https://www.aglogic.com.au/>)

<sup>1</sup>ET<sub>0</sub> is the reference evapotranspiration, an estimation of the evapotranspiration from the “reference surface” – grass with an assumed height of 0.12m.

Monday, 30 December to Sunday, 5 January 2025

Location	ET <sub>0</sub> <sup>1</sup> (mm)	Rainfall (mm)	Rainfall (month-to-date; mm)	Soil temp (°C) 9:00 a.m. @ 10 cm
Ouse	36.9	0.6	0.4	19.8*

Climate data for Ouse is collated from [www.bom.gov.au](http://www.bom.gov.au). It is displayed in a different table because the date that data is available is different to the UNITAS Weathermation stations.

\* This soil temp information is from Bushy Park <http://www.bom.gov.au/products/IDT65176.shtml>

<sup>1</sup>ET<sub>0</sub> is the reference evapotranspiration, an estimation of the evapotranspiration from the “reference surface” – grass with an assumed height of 0.12m.

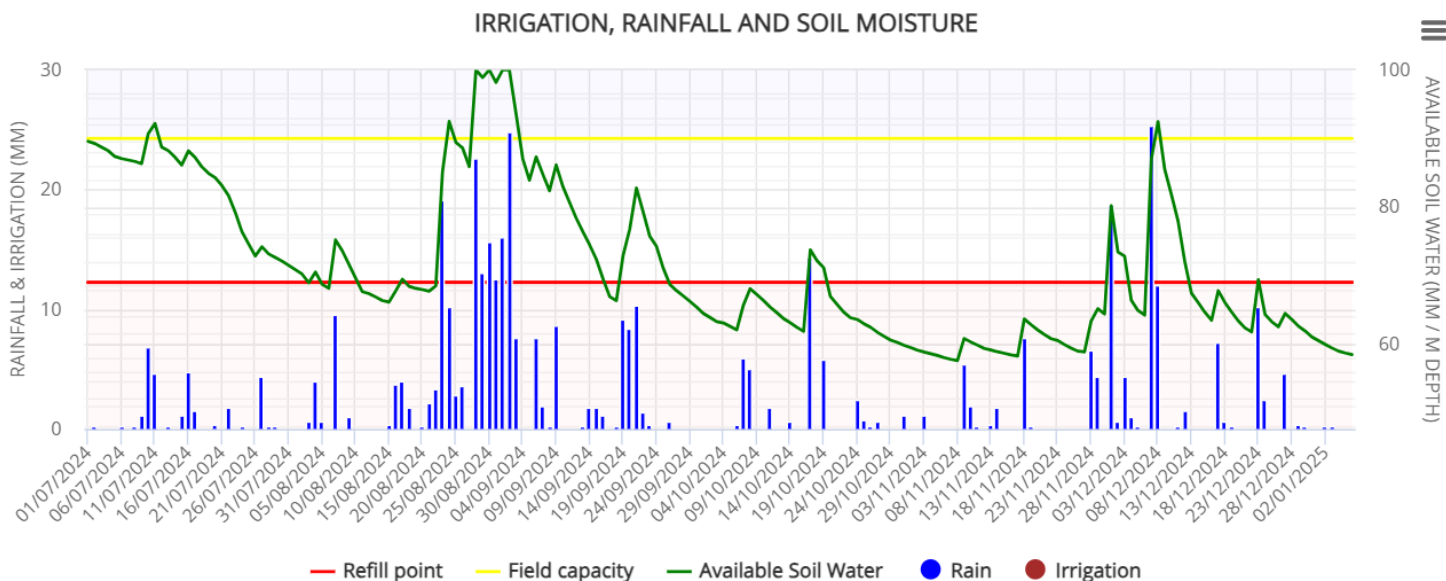

# Soil Moisture Budgets

The soil moisture budgets below have been produced using IrriPasture (<https://irripasture.com/>). This is a free budgeting tool that can help you make decisions about your irrigation scheduling. This report has budgets for Bushy Park/Ouse, Scottsdale, Meander, Sheffield, Elliott and Lileah. The graphs show the available soil moisture (green line). The aim is to keep this green line between the red line (refill point) and the yellow line (field capacity). The distance between the yellow and red line is how much Readily Available Water (RAW) the soil holds. The amount of RAW your soil can hold will depend on your soil type. As a guide, the amount of Readily Available Water that is held in the top 30 cm for common soil types is:

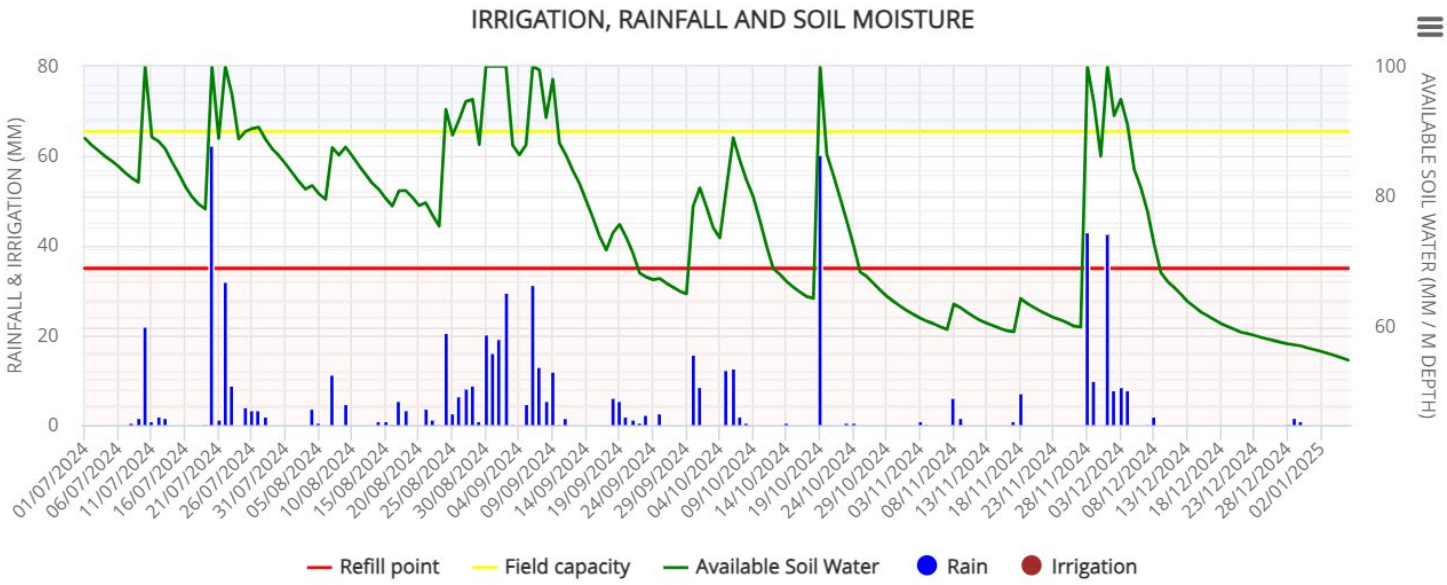

- Sand = 9 mm
- Loamy sand = 15 mm
- Sandy loam = 21 mm
- Loam = 27 mm
- Clay = 15 mm
- Clay loam = 24 mm

The soil moisture budgets in this report have used an 'average' RAW value of 21 mm. If your soil holds less soil moisture than this, you will need to irrigate earlier than the water budget indicates. If your soil holds more moisture than this, you probably don't need to irrigate as soon. **THESE SOIL MOISTURE BUDGETS ARE A GUIDE ONLY.** Please do a physical check of the soil moisture on your farm to help make the decision when to start irrigating.
